

PhD COURSE IN "SCIENCES OF MIND" (XXXIX cycle) Program

Year	Activity	Duration (hours)	Description	Notes
I	English for the sciences of the mind and the brain	14	This activity aims to refine and improve the level of scientific English applied to Cognitive Science through a CLIL/CBI (Content and Language Integrated Learning/Content Based Instruction) approach to teaching English for specific purposes. The teaching is based on activities of comprehension, analysis and language production, with a focus on the use of scientific articles and abstracts related to Cognitive Science. The teaching stimulates PhD students to become familiar with the specific language of Cognitive Science, acquiring the communicative skills necessary to understand and organize information and arguments in English.	Includes final exam
I	Methods in Cognitive Neurosciences	14	The aim of the course is to provide doctoral students with the tools to understand the methodologies used in cognitive neuroscience to study the relationships between brain and behaviour. The course provides knowledge on the use of investigative techniques mainly applied to cognitive neuroscience, promoting the development of original ideas and their application in a clinical and research context. The teaching includes modules relating to the description of the following topics: -psychophysiological indices, -non-invasive brain stimulation techniques -Computerized eye-tracking -Event-related potentials and EEG	
I	Methods in Social and Psychological Research	14	This activity aims to provide doctoral students with an introduction to structural equation models (SEM) with a special focus on measurement and structure	

invariance aspects and their use in psychology research. In addition, some applications of these analyses to psychological research questions in social contexts or analyses of longitudinal data are shown. The applications will be carried out via the AMOS programme. The teaching includes modules on "Introduction to bootstrapping and mediation". "Application of SEM in developmental psychology with EQS, AMOS and Lavana puckage of R: Path analysis, latent variables and mediations "the beauting invariance and longitudinal factorial invariance and longitudinal factorial invariance and longitudinal factorial invariance in structural equation modelling: theoretical outline and exercise." The course also includes a module on social cognition research. 30 The activity involves a set of seminars moderated by a lecturer who invites researchers and professors from Italian and foreign universities to address topics in Cognitive Science and Behavioural Neuroscience. The seminars are held in English. For each seminar, there is a frontal part in which the expert deals with the topic in question and a second interactive part characterized by a critical discussion between lecturer and PhD students. 10 seminars are scheduled in the first year, 10 seminars in the second year and 10 seminars are scheduled in the first year, 10 osminars are scheduled in the first year, 10 seminars are sched					
psychology research. In addition, some applications of these analyses to psychological riscarch questions in social contexts or analyses of longitudinal data are shown. The applications will be carried out via the AMOS programme. The teaching includes modules on "Introduction to bootstrapping and mediation"; "Application of SEM in developmental psychology with EQS, AMOS and Lavana package of R. Path analysis, latent variables and mediations with the implementation of the bootstrapping approach", "Cross-sectional factorial invariance and longitudinal factorial invariance in structural equation modelling; theoretical outline and exercise", The course also includes a module on social cognition research. I. III, III Seminars 30 The activity involves a set of seminars moderated by a locturer who invites researchers and professors from Italian and foreign universities to address topics in Cognitive Science and Behavioural Neuroscience. The seminars are held in English. For each seminar, there is a frontal part in which the expert deals with the topic in question and a second interactive part characterized by a critical discussion between lecturer and PhD students. 10 seminars are scheduled in the first year, 10 seminars in the second year and 10 seminars in the topic in question and a second interactive part characterized by a critical discussion between lecturer and PhD students in English. The Titerature review ourse aims to provide the methodological and bibliographical tools useful for setting up a literature review, which can be the starting and finishing tool of a study and research pathway aimed at the elaboration of a doctoral thesis, articles and scientific papers. The course focuses on the methodology used to carry out a systematic literature review and a meta-analysis and encourages PhD students to develop the skills to choose contributions and select sources.				invariance aspects and their use in	
some applications of these analyses to psychological research questions in social contexts or analyses of longitudinal data are shown. The applications will be carried out via the AMOS programme. The teaching includes modules on "Introduction to bootstrapping and mediation": "Application of SEM in developmental psychology with EQS, AMOS and Lavam package of R: Path analysis, latent variables and mediations with the implementation of the bootstrapping approach", "Cross-sectional factorial invariance and longitudinal factorial invariance in structural equation modelling: theoretical outline and exercise". The course also includes a module on social cognition research. The activity involves a set of seminars moderated by a lecturer who invites researches and professors from Italian and foreign universities to address topics in Cognitive Science and Behavioural Neuroscience. The seminars are held in English. For each seminar, there is a frontal part in which the expert deals with the topic in question and a second interactive part characterized by a critical discussion between lecturer and PhD students. 10 seminars are scheduled in the first year, 10 seminars in the second year and 10 seminars in the first year. 10 years y					
to psychological research questions in social contexts or malyses of longitudinal data are shown. The applications will be carried out via the AMOS programme. The teaching includes modules on "Introduction to bootstrapping and mediation": "Application of SEM in developmental psychology with EQS, AMOS and Lavaan package of R: Path analysis, latent variables and mediations with the implementation of the bootstrapping approach", "Cross-sectional factorial invariance in structural equation modelling: theoretical outline and exercise". The course also includes a module on social cognition research. I, II, III Seminars 30 The activity involves a set of seminars moderated by a lecturer who invites researchers and professors from Italian and foreign universities to address topics in Cognitive Science and Behavioural Neuroscience. The seminars are held in English. For each seminar, there is a frontal part in which the expert deals with the topic in question and a second interactive part characterized by a critical discussion between lecturer and PhD students. 10 seminars are scheduled in the first year, 10 seminars in the second year and 10 seminars in the year year. The course also includes a module on social cognition research. I, II, III Seminars 30 The activity involves a set of seminars moderated by a lecture who invites researchers and professors from Italian and foreign universities to address topics in Cognitive Science and Behavioural Neuroscience. The seminars are held in English. For each seminar, there is a frontal part in which the expert deals with the topic in question and a second interactive part characterized by a critical discussion between lecturer and PhD students. 10 seminars are scheduled in the first year, 10 seminars in the second year and 10 seminars in the first year, 10 seminars in the first year, 10 seminars in the first year, 10 to seminars in the first year, 10 seminars in the lift year. Each interactive seminar corresponds to 1 CFU due to the high level of interaction between lecturer and PhD students in English. The literature review course aims to provide the methodological and bibliographical tools useful for setting up a literature review, which can be the starting and finishing tool of a study and research pathway aimed at the elaboration of a doctoral thesis, articles and cicentific papers. The course focuses on the methodology used to carry out a systematic literature review and a meta-analysis and encourages PhD students to develop the skills to choose contributions and select sources.					
mediation": "Application of SEM in developmental psychology with EQS, AMOS and Lavaan package of R: Path analysis, latent variables and mediations with the implementation of the bootstrapping approach", "Cross-sectional factorial invariance and longitudinal factorial invariance in structural equation modelling: theoretical outline and exercise". The course also includes a module on social cognition research. I. II, III Seminars 30 The activity involves a set of seminars moderated by a lecturer who invites researchers and professors from Italian and foreign universities to address topics in Cognitive Science and Behavioural Neuroscience. The seminars are held in English. For each seminar, there is a frontal part in which the expert deals with the topic in question and a second interactive part characterized by a critical discussion between lecturer and PhD students. Io seminars are scheduled in the first year, 10 seminars in the second year and 10 seminars in the first year, 10 seminars in the first year, 10 seminars in the second year and 10 seminars in the third year. Each interactive seminar corresponds to 1 CFU due to the high level of interaction between lecturer and PhD students in English. I Literature review 7 The 'literature review' course aims to provide the methodological and bibliographical tools useful for setting up a literature review, which can be the starting and finishing tool of a study and research pathway aimed at the elaboration of a doctoral thesis, articles and scientific papers. The course focuses on the methodology used to carry out a systematic literature review and a methodology used to carry out a systematic literature review and a meth					
developmental psychology with FOS, AMOS and Lavaan package of R: Path analysis, latent variables and mediations with the implementation of the bootstrapping approach", "Cross- sectional factorial invariance and longitudinal factorial invariance in structural equation modelling: theoretical outline and exercise". The course also includes a module on social cognition research. I, II, III Seminars 30 The activity involves a set of seminars moderated by a lecturer who invites researchers and professors from Italian and foreign universities to address topics in Cognitive Science and Behavioural Neuroscience. The seminars are held in English, For each seminar, there is a frontal part in which the expert deals with the topic in question and a second interactive part characterized by a critical discussion between lecturer and PhD students, 10 seminars are scheduled in the first year, 10 seminars in the second year and 10 seminars in the thirly year. Each interactive seminar corresponds to 1 CFU due to the high level of interaction between lecturer and PhD students in English. I Literature review 7 The "Iterature review" course aims to provide the methodological and bibliographical tools useful for setting up a literature review, which can be the starting and finishing tool of a study and research pathway aimed at the elaboration of a doctoral thesis, articles and scientific papers. The course focuses on the methodology used to carry out a systematic literature review and a metha-analysis and encourages PhD students to develop the skills to choose contributions and select sources.					
FQS, ÅMOS and Lavaam package of R: Path analysis, latent variables and mediations with the implementation of the bootstrapping approach", "Cross-sectional factorial invariance and longitudinal factorial invariance in structural equation modelling: theoretical outline and exercise". The course also includes a module on social cognition research. I. II, III Seminars 30 The activity involves a set of seminars moderated by a lecturer who invites researchers and professors from Italian and foreign universities to address topics in Cognitive Science and Behavioural Neuroscience. The seminars are held in English. For each seminar, there is a frontal part in which the expert deals with the topic in question and a second interactive part characterized by a critical discussion between lecturer and PhD students. I0 seminars are scheduled in the first year, 10 seminars in the second year and 10 seminars in the strictly earn and 10 seminars in the third year. Each interactive seminar corresponds to 1 CFU due to the high level of interactive seminar corresponds to 1 CFU due to the high level of interactive seminar corresponds to 1 CFU due to the high level of interactive seminar corresponds to 1 CFU due to the high level of interactive seminar corresponds to 1 CFU due to the high level of interactive seminar corresponds to 1 CFU due to the high level of interactive seminar corresponds to 1 CFU due to the high level of interactive seminar corresponds to 1 CFU due to the high level of interactive seminar corresponds to 1 CFU due to the high level of interactive seminar corresponds to 1 CFU due to the high level of interactive seminar corresponds to 1 CFU due to the high level of interactive seminar corresponds to 1 CFU due to the high level of interactive seminar corresponds to 1 CFU due to the high level of interactive seminar corresponds to 1 CFU due to the high level of interactive seminary and 10 seminars are scheduled in the first year. To seminary and the elaboration of a doctoral thesis, articles and scientific paper					
of R: Path analysis, latent variables and mediations with the implementation of the bootstrapping approach", "Cross-sectional factorial invariance and longitudinal factorial invariance in structural equation modelling: theoretical outline and exercise". The course also includes a module on social cognition research. I. II, III Seminars 30 The activity involves a set of seminars moderated by a lecturer who invites researchers and professors from Italian and foreign universities to address topics in Cognitive Science and Behavioural Neuroscience. The seminars are held in English. For each seminar, there is a frontal part in which the expert deals with the topic in question and a second interactive part characterized by a critical discussion between lecturer and PhD students. I0 seminars are scheduled in the first year, 10 seminars in the second year and 10 seminars in the structure review enter the path of interactive part characterized by a critical discussion between lecturer and PhD students in English. I Literature review 7 The literature review course aims to provide the methodological and bibliographical tools useful for setting up a literature review course and the setting up a literature review, which can be the starting and finishing tool of a study and research pathway aimed at the elaboration of a doctoral thesis, articles and scientific papers. The course focuses on the methodology used to carry out a systematic literature review and a meta-analysis and encourages PhD students to develop the skills to choose contributions and select sources.				1 1 0	
and mediations with the implementation of the bootstrapping approach", "Cross-sectional factorial invariance and longitudinal factorial invariance in structural equation modelling: theoretical outline and exercise". The course also includes a module on social cognition research. I. II, III Seminars 30 The activity involves a set of seminars moderated by a lecturer who invites researchers and professors from Italian and foreign universities to address topics in Cognitive Science and Behavioural Neuroscience. Each interactive seminar corresponds to 1 CFU due to the high level of interaction between lecturer and PhD students in English. The literature review course aims to provide the methodological and bibliographical tools useful for setting up a literature review, which can be the starting and finishing tool of a study and research pathway aimed at the elaboration of a doctoral thesis, articles and scientific papers. The course focuses on the methodology used to carry out a systematic literature review and a meta-analysis and encourages PhD students to develop the skills to choose contributions and select sources.					
Neuroscience. The seminars are held in English. For each seminar, there is a frontal part in which the expert deals with the topic in question and a second interactive part characterized by a critical discussion between lecturer and PhD students. 10 seminars are scheduled in the first year, 10 seminars in the second year and 10 seminars in the second year and 10 seminars in the third year. Each interactive seminar corresponds to 1 CFU due to the high level of interaction between lecturer and PhD students in English. I Literature review 7 The 'literature review' course aims to provide the methodological and bibliographical tools useful for setting up a literature review, which can be the starting and finishing tool of a study and research pathway aimed at the elaboration of a doctoral thesis, articles and scientific papers. The course focuses on the methodology used to carry out a systematic literature review and a meta-analysis and encourages PhD students to develop the skills to choose contributions and select sources.

			literature review in all its parts	
			(introduction, materials and	
			methods, results, discussion,	
			conclusions and clinical	
			implications).	
I	Publish or Perish, Publishing in	7	Writing, publishing and	
	high- impact journal		disseminating new knowledge is an	
			important part of academic activity	
			also in the field of psychology.	
			Therefore, the wide dissemination	
			of scientific research results	
			depends on the choice and selection	
			of a high-impact peer-reviewed	
			scientific journal in which to	
			publish the paper. The course aims	
			to provide useful tools for exploring	
			the editorial process by proposing	
			recommendations and suggestions	
			for the writing of scientific articles	
			and their submission (and	
			acceptance) in international	
			scientific journals. Specifically, the	
			topics covered are: editorial	
			process, main reasons for	
			manuscript rejection, how to choose	
			the most suitable journal in the field	
			of psychology (consulting WOS,	
			SCOPUS and bibliometric indexes),	
			suggestions on writing a scientific	
			article: preparation of figures and	
			tables, writing, bibliography, title	
			and cover letter.	
I, II	Journal Club	14	The "Journal Club" teaching aims	
			to develop the skills of effective	
			scientific communication in	
			doctoral and post-doctoral students	
			and to develop critical and	
			evaluative skills regarding various	
			research topics in the different	
			fields of psychology. The course	
			consists of lectures in which the	
			lecturer illustrates the different	
		1	sections of an oral communication	
			(background, objectives, materials	
			and methods, results and	
			conclusion) and practical activities	
			in which the doctoral students	
			practice presenting in English the	
			objectives, methodology and results	
			of studies in the literature on	
		1	psychology topics of interest to the	
			1 0 0 1	
			doctoral programme.
